## Remote Office Service

The shift to Work-From-Home (WFH) has changed the network paradigm for most IT Managers, with workers needing more robust routers and security as part of a **standardized home-office infrastructure** managed by a service provider.

To meet this need, Mosaic NetworX has launched its Remote Office Service (ROS) that allows organizations to provide remote workers with company-provided services that deliver equivalent security and Quality-of-Experience (QoE) as they would have working in the office.

## Key Benefits of Mosaic's Remote Office Service

### Resiliency

Broadband and dual-carrier 4G/LTE backup. Wireless options where fiber or copper connections aren't available.

### Efficiency

Bundle with Internet, CloudPhone, SD-WAN, and/or Cybersecurity. Ala Carte options ensure WFH Quality of Experience

### Security

Enterprise-class Firewall with Cloud Security Stack. Defense-in-Depth approach provides secure internet and web gateway extends On-net protections to your endpoints while not on your network. Access Control, Threat Prevention, Data Protection

### Simplicity

Consolidated invoices for multiple locations. Centralized billing directly to the business

It is estimated that 30-40% of the remote workforce will continue to work from home (WFH) once the current COVID-19 pandemic plays out. Matt Hiles, Chief Operating Officer of Mosaic NetworX states: "Work from home is here to stay." Indeed, **Gartner CFO** survey reveals 74% intend to shift some employees to remote work permanently.

With homes serving as the new office spaces, Mosaic's Remote Office Service solves the problem of easily and cost-effectively deploying a **standardized home-office infrastructure** that delivers an equivalent security and user-experience as the worker would have in the office.
